PROFESSIONAL SUMMARY

I'm Osajere Finney, a software developer who enjoys turning ideas and product requirements into digital experiences people can actually use. My work spans digital trading platforms, community products, booking systems, commerce and media, with experience across frontend engineering, backend integrations and product delivery. I bring a practical, end-to-end mindset to software development, from understanding the problem and implementing features to debugging, refining user experiences and getting products ready for release.

CORE COMPETENCIES

- **Frontend:** React, Next.js, TypeScript, JavaScript, Tailwind CSS, SCSS, Bootstrap, responsive UI, accessibility
- **Backend & APIs:** Node.js, Express.js, NestJS, REST API integration, authentication flows, form validation, error handling
- **Data & Platforms:** MongoDB, Firebase/Firestore, PostgreSQL, admin dashboards, real-time chat, booking workflows
- **Tools & Workflow:** Git, GitHub, Vercel, Cloudflare Workers, Brevo, Cloudinary, Google Calendar, Figma handoff, code review, debugging, cross-browser QA

PROFESSIONAL EXPERIENCE

Frontend Developer | TradeByBartr | 2025 - Present

tradebybartr.com

- Help build a live digital trading platform from the ground up, contributing frontend implementation across multiple core product areas.
- Translate Figma designs and product requirements into responsive, accessible React and Next.js interfaces using TypeScript and Tailwind CSS.
- Integrate REST APIs across authentication, forms, validation, and error states, while refactoring components for reuse across pages.
- Debug cross-browser and device issues and collaborate with designers and engineers through code review, ticket scoping, and release coordination.

Technical Engineering Intern | Paystro | 2025

- Completed assigned engineering tickets within delivery timelines in a production fintech environment.
- Worked within team practices including backlog grooming, code review etiquette, and release hygiene, strengthening my understanding of cross-functional product delivery.

Freelance Full-Stack Developer | Independent | 2023 - Present

- Work independently on client and collaborative digital products, taking features from frontend implementation through production applications, admin tools, API integrations, and real-time functionality.
- Contribute across community, booking, media, and event use cases, from implementation through launch, iteration, and responsive interface polish.

SELECTED PROJECTS

Makgromart | Full-Stack Developer | Live · Launched October, 2026

makgromart.com

- Built and launched Makgromart end-to-end, contributing across frontend implementation, backend integration, and the overall user experience. Delivered a responsive e-commerce experience with supporting application flows. Technologies: Firebase/Firestore for order storage, Cloudflare Workers for email delivery, Brevo for transactional emails, and Cloudinary for image uploads.

Base Connect | Full-Stack Developer | Live

baseconnecthub.org

- Built key features for the original Web3 task marketplace, including an admin dashboard for managing platform content and users.
- Implemented an in-app chat room, handling interface states, message flows, and backend integration.
- Continue contributing to the evolving product as BaseConnect's direction shifts toward business growth, operations, and digital systems.

St. Agnes | Freelance Full-Stack Developer | Live

stagnesdesigns.com

- Designed and implemented the booking flow, form validation, submission states, and admin request management.
- Set up the data model and API integration connecting client booking requests to the admin dashboard. The backend uses NestJS and PostgreSQL, with Google Calendar integration and email reminders.
- Polished the responsive experience and took the project through to a successful public launch.

CRA8 Limited | Freelance Full-Stack Developer | Live

cra8limited.com

- Built and launched CRA8 Limited's public-facing website, positioning the company as a media and creative agency rather than an individual portfolio. The publishing backend uses Express with a PostgreSQL database.
- Created a cinematic, media-first responsive experience for the brand, its work, and services, while optimising image and video delivery across screen sizes.

ChessMasters | Website Developer & Content Strategist | Live

chessmasters.org

- Reworked the site after the 2026 tournament, shifting it from pre-event registration to a post-event information hub.
- Built Results, Gallery, and Vendors Registration pages and updated navigation, calls-to-action, and site-wide SEO copy for the next tournament cycle.

EstateSync | Full-Stack Developer, volunteer collaboration | Team project

estate-sync.vercel.app

- Contributed to the frontend implementation as part of the team, building responsive pages and reusable React components from design through working UI.
- Worked in a multi-developer Git workflow, reviewing pull requests and aligning on shared UI conventions.

WhatsApp Birthday Automation Bot | Personal Project | Working project

[GitHub repository](#)

- Built a Node.js automation that filters contacts by date and sends birthday messages to direct and group chats.
- Used RemoteAuth for persistent sessions and designed the bot to run on a schedule through GitHub Actions.

EDUCATION & CERTIFICATIONS

B.Sc. Physics | Federal University of Agriculture, Abeokuta (FUNAAB) | **2024**

AltSchool Africa | Frontend Engineering, Baraka Cohort | March 2026 | [View Certificate](#)

NYSC | Service year completed | **2026**
